Projects

Home Health Care - Final Year Project [React JS, *Mongo DB*]
A website where patients can acquire medical facilities at home. This website eradicates the need to go to a hospital for basic treatments like nursing, physiotherapy etc. It comprises of 3 phases patient phase, App Administration, and Organization Administration. Patients can check availability, Schedule a meeting and rate a staff member. Among available staff, a staff member is selected based on his/her rating It's been automated no Administration indulgence. Organization administration deals with manipulating services and staff. App Administration permits an organization admin to be associated with Home Health Care.

Ludo Board Game [*Unity 3d, C#*]
A board game for two to four players.

Student Management System [*Java Desktop Application*]
A desktop application where schools can manage student related data.

ATM Management System [*Asp.net, C#*]
An application which allows customers to perform transactions.

FIFA Website Replication [*HTML, CSS, JavaScript*]
FIFA website
